West Iron County Middle School Curriculum Map

Mathematics Grade 7

Updated 2023-2024

Based on the Common Core State Standards

PREFACE

This curriculum map is aligned to the Common Core State Standards for mathematics. The timeline presented for each unit is meant to aid in estimating and defining the relative pacing and sequencing of the course. It is not imperative that it be followed literally. The following is the breakdown of the units in Math 7:

Semester	Unit Number	Chapters from <i>Big Ideas Math</i>	Unit Title
1	Unit 1	Chapters 1 & 2	Rational Numbers
2	Unit 2	Chapters 3 & 4	Algebra
	Unit 3	Chapters 5 & 6	Proportional Reasoning
	Unit 4	Chapters 9 & 10	Geometry
	Unit 5	Chapters 7 & 8 (Chapter 8 as time permits)	Probability & Statistics (Statistics as time permits)

Daily instructional tools, materials, and methods:

- ❖ Big Ideas Math Textbook & Supplementary Materials (Paper & Online)
- Notebook
- Interactive whiteboard (as available)
- Computers (as available)
- Class discussion and practice
- Small-group discussion and practice
- Scientific calculators
- Classroom website containing additional online resources, tools, and apps
- Supplementary material provided via digital curriculums (in Google Drive)

Periodic assessment and progress monitoring:

- Independent practice
- Lesson quizzes
- Unit tests
- * NWEA MAP Growth standardized achievement test (given three times per school year)

STANDARDS FOR MATHEMATICAL PRACTICE

These mathematical practices should be integrated into daily lessons as applicable:

CCSS.Math.Practice.MP1 - Make sense of problems and persevere in solving them. Mathematically proficient students start by explaining to themselves the meaning of a problem and looking for entry points to its solution. They analyze givens, constraints, relationships, and goals. They make conjectures about the form and meaning of the solution and plan a solution pathway rather than simply jumping into a solution attempt. They consider analogous problems, and try special cases and simpler forms of the original problem in order to gain insight into its solution. They monitor and evaluate their progress and change course if necessary. Older students might, depending on the context of the problem, transform algebraic expressions or change the viewing window on their graphing calculator to get the information they need. Mathematically proficient students can explain correspondences between equations, verbal descriptions, tables, and graphs or draw diagrams of important features and relationships, graph data, and search for regularity or trends. Younger students might rely on using concrete objects or pictures to help conceptualize and solve a problem. Mathematically proficient students check their answers to problems using a different method, and they continually ask themselves, "Does this make sense?" They can understand the approaches of others to solving complex problems and identify correspondences between different approaches.

CCSS.Math.Practice.MP2 - Reason abstractly and quantitatively. Mathematically proficient students make sense of quantities and their relationships in problem situations. They bring two complementary abilities to bear on problems involving quantitative relationships: the ability to *decontextualize*—to abstract a given situation and represent it symbolically and manipulate the representing symbols as if they have a life of their own, without necessarily attending to their referents—and the ability to *contextualize*, to pause as needed during the manipulation process in order to probe into the referents for the symbols involved. Quantitative reasoning entails habits of creating a coherent representation of the problem at hand; considering the units involved; attending to the meaning of quantities, not just how to compute them; and knowing and flexibly using different properties of operations and objects.

CCSS.Math.Practice.MP3 - Construct viable arguments and critique the reasoning of others. Mathematically proficient students understand and use stated assumptions, definitions, and previously established results in constructing arguments. They make conjectures and build a logical progression of statements to explore the truth of their conjectures. They are able to analyze situations by breaking them into cases, and can recognize and use counterexamples. They justify their conclusions, communicate them to others, and respond to the arguments of others. They reason inductively about data, making plausible arguments that take into account the context from which the data arose. Mathematically proficient students are also able to compare the effectiveness of two plausible arguments, distinguish correct logic or reasoning from that which is flawed, and—if there is a flaw in an argument—explain what it is. Elementary students can construct arguments using concrete referents such as objects, drawings, diagrams, and actions. Such arguments can make sense and be correct, even though they are not generalized or made formal until later grades. Later, students learn to determine domains to which an argument applies. Students at all grades can listen or read the arguments of others, decide whether they make sense, and ask useful questions to clarify or improve the arguments.

CCSS.Math.Practice.MP4 - Model with mathematics. Mathematically proficient students can apply the mathematics they know to solve problems arising in everyday life, society, and the workplace. In early grades, this might be as simple as writing an addition equation to describe a situation. In middle grades, a student might apply proportional reasoning to plan a school event or analyze a problem in the community. By high school, a student might use geometry to solve a design problem or use a function to describe how one quantity of interest depends on another. Mathematically proficient students who can apply what they know are comfortable making assumptions and approximations to simplify a complicated situation, realizing that these may need revision later. They are able to identify important quantities in a practical situation and map their relationships using such tools as diagrams, two-way tables, graphs, flowcharts and formulas. They can analyze those relationships mathematically to draw conclusions. They routinely interpret their mathematical results in the context of the situation and reflect on whether the results make sense, possibly improving the model if it has not served its purpose.

CCSS.Math.Practice.MP5 - Use appropriate tools strategically. Mathematically proficient students consider the available tools when solving a mathematical problem. These tools might include pencil and paper, concrete models, a ruler, a protractor, a calculator, a spreadsheet, a computer algebra system, a statistical package, or dynamic geometry software. Proficient students are sufficiently familiar with tools appropriate for their grade or course to make sound decisions about when each of these tools might be helpful, recognizing both the insight to be gained and their limitations. For example, mathematically proficient high school students analyze graphs of functions and solutions generated using a graphing calculator. They detect possible errors by strategically using estimation and other mathematical knowledge. When making mathematical models, they know that technology can enable them to visualize the results of varying assumptions, explore consequences, and compare predictions with data. Mathematically proficient students at various grade levels are able to identify relevant external mathematical resources, such as digital content located on a website, and use them to pose or solve problems. They are able to use technological tools to explore and deepen their understanding of concepts.

CCSS.Math.Practice.MP6 - Attend to precision. Mathematically proficient students try to communicate precisely to others. They try to use clear definitions in discussion with others and in their own reasoning. They state the meaning of the symbols they choose, including using the equal sign consistently and appropriately. They are careful about specifying units of measure, and labeling axes to clarify the correspondence with quantities in a problem. They calculate accurately and efficiently, express numerical answers with a degree of precision appropriate for the problem context. In the elementary grades, students give carefully formulated explanations to each other. By the time they reach high school they have learned to examine claims and make explicit use of definitions.

CCSS.Math.Practice.MP7 - Look for and make use of structure. Mathematically proficient students look closely to discern a pattern or structure. Young students, for example, might notice that three and seven more is the same amount as seven and three more, or they may sort a collection of shapes according to how many sides the shapes have. Later, students will see 7×8 equals the well-remembered $7 \times 5 + 7 \times 3$, in preparation for learning about the distributive property. In the expression $x^2 + 9x + 14$, older students can see the 14 as 2×7 and the 9 as 2 + 7. They recognize the significance of an existing line in a geometric figure and can use the strategy of drawing an auxiliary line for solving problems. They also can step back for an overview and shift perspective. They can see complicated things, such as some algebraic expressions, as single objects or as being composed of several objects. For example, they can see $5 - 3(x - y)^2$ as 5 minus a positive number times a square and use that to realize that its value cannot be more than 5 for any real numbers x and y.

CCSS.Math.Practice.MP8 - Look for and express regularity in repeated reasoning. Mathematically proficient students notice if calculations are repeated, and look both for general methods and for shortcuts. Upper elementary students might notice when dividing 25 by 11 that they are repeating the same calculations over and over again, and conclude they have a repeating decimal. By paying attention to the calculation of slope as they repeatedly check whether points are on the line through (1, 2) with slope 3, middle school students might abstract the equation (y - 2)/(x - 1) = 3. Noticing the regularity in the way terms cancel when expanding (x - 1)(x + 1), $(x - 1)(x^2 + x + 1)$, and $(x - 1)(x^3 + x^2 + x + 1)$ might lead them to the general formula for the sum of a geometric series. As they work to solve a problem, mathematically proficient students maintain oversight of the process, while attending to the details. They continually evaluate the reasonableness of their intermediate results.

UNIT 1: RATIONAL NUMBERS

Chapter 1 - Adding and Subtracting Rational Numbers

Section	Learning Target	Success Criteria
1.1 Rational Numbers	Understand absolute values and ordering of rational numbers.	Graph rational numbers on a number line. Find the absolute value of a rational number. Use a number line to compare rational numbers.
1.2 Adding Integers	Find sums of integers.	Explain how to model addition of integers on a number line. Find sums of integers by reasoning about absolute values. Explain why the sum of a number and its opposite is 0.
1.3 Adding Rational Numbers	Find sums of rational numbers.	Explain how to model addition of rational numbers on a number line. Find sums of rational numbers by reasoning about absolute values. Use properties of addition to efficiently add rational numbers.
1.4 Subtracting Integers	Find differences of integers.	Explain how subtracting integers is related to adding integers. Explain how to model subtraction of integers on a number line. Find differences of integers by reasoning about absolute values.
1.5 Subtracting Rational Numbers	Find differences of rational numbers and find distances between numbers on a number line.	Explain how to model subtraction of rational numbers on a number line. Find differences of rational numbers by reasoning about absolute values. Find distances between numbers on a number line.

Through the C	Chapter				
Standard	1.1	1.2	1.3	1.4	1.5
7.NS.A.1a Describe situations in which opposite quantities combine to make 0.	•	•	*		
7.NS.A.1b Understand $p+q$ as the number located a distance $ q $ from p , in the positive or negative direction depending on whether q is positive or negative. Show that a number and its opposite have a sum of 0 (are additive inverses). Interpret sums of rational numbers by describing real-world contexts.	•	•	*		
7.NS.A.1c Understand subtraction of rational numbers as adding the additive inverse, $p-q=p+(-q)$. Show that the distance between two rational numbers on the number line is the absolute value of their difference, and apply this principle in real-world contexts.	•			•	*
7.NS.A.1d Apply properties of operations as strategies to add and subtract rational numbers.	A	•	•		*
7.NS.A.3 Solve real-world and mathematical problems involving the four operations with rational numbers.	•	•	•	•	•

Chapter 2 - Multiplying and Dividing Rational Numbers

Sec	ction	Learning Target	Success Criteria
2.1 Multiply	ring Integers	Find products of integers.	Explain the rules for multiplying integers. Find products of integers with the same sign. Find products of integers with different signs.
2.2 Dividing	Integers	Find quotients of integers.	Explain the rules for dividing integers. Find quotients of integers with the same sign. Find quotients of integers with different signs.
2.3 Convert Fraction Decima	is and	Convert between different forms of rational numbers.	Explain the difference between terminating and repeating decimals. Write fractions and mixed numbers as decimals. Write decimals as fractions and mixed numbers.
2.4 Multiply Number	•	Find products of rational numbers.	Explain the rules for multiplying rational numbers. Find products of rational numbers with the same sign. Find products of rational numbers with different signs.
2.5 Dividing Number		Find quotients of rational numbers.	Explain the rules for dividing rational numbers. Find quotients of rational numbers with the same sign. Find quotients of rational numbers with different signs.

Through the Chapter					
Standard	2.1	2.2	2.3	2.4	2.5
7.NS.A.2a Understand that multiplication is extended from fractions to rational numbers by requiring that operations continue to satisfy the properties of operations, particularly the distributive property, leading to products such as $(-1)(-1) = 1$ and the rules for multiplying signed numbers. Interpret products of rational numbers by describing real-world contexts.	•			*	
7.NS.A.2b Understand that integers can be divided, provided that the divisor is not zero, and every quotient of integers (with non-zero divisor) is a rational number. If p and q are integers, then $-(p/q) = (-p)/q = p/(-q)$. Interpret quotients of rational numbers by describing real-world contexts.		•	•		*
7.NS.A.2c Apply properties of operations as strategies to multiply and divide rational numbers.	•			*	
7.NS.A.2d Convert a rational number to decimal using long division; know that the decimal form of a rational number terminates in 0s or eventually repeats.			*		
7.NS.A.3 Solve real-world and mathematical problems involving the four operations with rational numbers.	•	•		•	*

Key Vocabulary

• integers, rational numbers, absolute value, additive inverse, terminating decimal, repeating decimal, complex fraction

Chapter 3 - Expressions

	Section	Learning Target	Success Criteria
3.1	Algebraic Expressions	Simplify algebraic expressions.	Identify terms and like terms of algebraic expressions. Combine like terms to simplify algebraic expressions. Write and simplify algebraic expressions to solve real-life problems.
3.2	Adding and Subtracting Linear Expressions	Find sums and differences of linear expressions.	Explain the difference between linear and nonlinear expressions. Find opposites of terms that include variables. Apply properties of operations to add and subtract linear expressions.
3.3	The Distributive Property	Apply the Distributive Property to generate equivalent expressions.	Explain how to apply the Distributive Property. Use the Distributive Property to simplify algebraic expressions.
3.4	Factoring Expressions	Factor algebraic expressions.	Identify the greatest common factor of terms, including variable terms. Use the Distributive Property to factor algebraic expressions. Write a term as a product involving a given factor.

Through the Chapter				
Standard	3.1	3.2	3.3	3.4
7.EE.A.1 Apply properties of operations as strategies to add, subtract, factor, and expand linear expressions with rational coefficients.	•	•	•	*
7.EE.A.2 Understand that rewriting an expression in different forms in a problem context can shed light on the problem and how the quantities in it are related.		•	•	*

Key	
▲ = preparing	$\bigstar=complete$
● = learning	■ = extending

Key Vocabulary

• like terms, simplest form, linear expression, factoring an expression, equivalent equations, inequality, solution of an inequality, solution set, graph of an inequality

Chapter 4 - Equations and Inequalities

	Section	Learning Target	Success Criteria
4.1	Solving Equations Using Addition or Subtraction	Write and solve equations using addition or subtraction.	Apply the Addition and Subtraction Properties of Equality to produce equivalent equations. Solve equations using addition or subtraction. Apply equations involving addition or subtraction to solve real-life problems.
4.2	Solving Equations Using Multiplication or Division	Write and solve equations using multiplication or division.	Apply the Multiplication and Division Properties of Equality to produce equivalent equations. Solve equations using multiplication or division. Apply equations involving multiplication or division to solve real-life problems.
4.3	Solving Two-Step Equations	Write and solve two-step equations.	Apply properties of equality to produce equivalent equations. Solve two-step equations using basic operations. Apply two-step equations to solve real-life problems.
4.4	Writing and Graphing Inequalities	Write inequalities and represent solutions of inequalities on number lines.	Write word sentences as inequalities. Determine whether a value is a solution of an inequality. Graph the solutions of inequalities.
4.5	Solving Inequalities Using Addition or Subtraction	Write and solve inequalities using addition or subtraction.	Apply the Addition and Subtraction Properties of Inequality to produce equivalent inequalities. Solve inequalities using addition or subtraction. Apply inequalities involving addition or subtraction to solve real-life problems.
4.6	Solving Inequalities Using Multiplication or Division	Write and solve inequalities using multiplication or division.	Apply the Multiplication and Division Properties of Inequality to produce equivalent inequalities. Solve inequalities using multiplication or division. Apply inequalities involving multiplication or division to solve real-life problems.
4.7	Solving Two-Step Inequalities	Write and solve two-step inequalities.	Apply properties of inequality to generate equivalent inequalities. Solve two-step inequalities using the basic operations. Apply two-step inequalities to solve real-life problems.

Through the C	hapte	r					
Standard	4.1	4.2	4.3	4.4	4.5	4.6	4.7
7.EE.B.4a Solve word problems leading to equations of the form $px + q = r$ and $p(x + q) = r$, where p , q , and r are specific rational numbers. Solve equations of these forms fluently. Compare an algebraic solution to an arithmetic solution, identifying the sequence of the operations used in each approach.	•	•	*				
7.EE.B.4b Solve word problems leading to inequalities of the form $px + q > r$ or $px + q < r$, where p , q , and r are specific rational numbers. Graph the solution set of the inequality and interpret it in the context of the problem.				•	•	•	*

UNIT 3: PROPORTIONAL REASONING

Chapter 5 - Ratios and Proportions

			I
	Section	Learning Target	Success Criteria
5.1	Ratios and Ratio Tables	Understand ratios of rational numbers and use ratio tables to represent equivalent ratios.	Write and interpret ratios involving rational numbers. Use various operations to create tables of equivalent ratios. Use ratio tables to solve ratio problems.
5.2	Rates and Unit Rates	Understand rates involving fractions and use unit rates to solve problems.	Find unit rates for rates involving fractions. Use unit rates to solve rate problems.
5.3	Identifying Proportional Relationships	Determine whether two quantities are in a proportional relationship.	Determine whether ratios form a proportion. Explain how to determine whether quantities are proportional. Distinguish between proportional and nonproportional situations.
5.4	Writing and Solving Proportions	Use proportions to solve ratio problems.	Solve proportions using various methods. Find a missing value that makes two ratios equivalent. Use proportions to represent and solve real-life problems.
5.5	Graphs of Proportional Relationships	Represent proportional relationships using graphs and equations.	Determine whether quantities are proportional using a graph. Find the unit rate of a proportional relationship using a graph. Create equations to represent proportional relationships.
5.6	Scale Drawings	Solve problems involving scale drawings.	The Find an actual distance in a scale drawing. Explain the meaning of scale and scale factor. Use a scale drawing to find the actual lengths and areas of real-life objects.

Through the Chapter							
Standard	5.1	5.2	5.3	5.4	5.5	5.6	
7.RP.A.1 Compute unit rates associated with ratios of fractions, including ratios of lengths, areas and other quantities measured in like or different units.	•	*					
7.RP.A.2a Decide whether two quantities are in a proportional relationship, e.g., by testing for equivalent ratios in a table or graphing on a coordinate plane and observing whether the graph is a straight line through the origin.			•		*		
7.RP.A.2b Identify the constant of proportionality (unit rate) in tables, graphs, equations, diagrams, and verbal descriptions of proportional relationships.		•	•		*		
7.RP.A.2c Represent proportional relationships by equations.					*		
7.RP.A.2d Explain what a point (x, y) on the graph of a proportional relationship means in terms of the situation, with special attention to the points $(0,0)$ and $(1, r)$ where r is the unit rate.					*		
7.RP.A.3 Use proportional relationships to solve multistep ratio and percent problems.	•	•		•			
7.G.A.1 Solve problems involving scale drawings of geometric figures, including computing actual lengths and areas from a scale drawing and reproducing a scale drawing at a different scale.						*	

Chapter 6 - Percents

	Section	Learning Target	Success Criteria
6.1	Fractions, Decimals, and Percents	Rewrite fractions, decimals, and percents using different representations.	Write percents as decimals and decimals as percents. Write fractions as decimals and percents. Compare and order fractions, decimals, and percents.
6.2	The Percent Proportion	Use the percent proportion to find missing quantities.	Write proportions to represent percent problems. Solve a proportion to find a percent, a part, or a whole.
6.3	The Percent Equation	Use the percent equation to find missing quantities.	Write equations to represent percent problems. Use the percent equation to find a percent, a part, or a whole.
6.4	Percents of Increase and Decrease	Find percents of change in quantities.	Explain the meaning of percent of change. Find the percent of increase or decrease in a quantity. Find the percent error of a quantity.
6.5	Discounts and Markups	Solve percent problems involving discounts and markups.	Use percent models to solve problems involving discounts and markups. Write and solve equations to solve problems involving discounts and markups.
6.6	Simple Interest	Understand and apply the simple interest formula.	Explain the meaning of simple interest. Use the simple interest formula to solve problems.

Through the Chapter						
Standard	6.1	6.2	6.3	6.4	6.5	6.6
7.RP.A.3 Use proportional relationships to solve multistep ratio and percent problems.		•	•	•	•	*
7.EE.B.3 Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies.	•	•	•	•	•	*

Key Vocabulary

 ratio, value of a ratio, equivalent ratios, ratio table, rate, unit rate, equivalent rates, proportion, cross products, proportional, constant of proportionality, scale drawing, scale model, scale, scale factor, percent of change, percent of increase, percent of decrease, percent error, discount, markup, interest, principal, simple interest

UNIT 4: GEOMETRY

Chapter 9 - Geometric Shapes and Angles

	Section	Learning Target	Success Criteria
9.1	Circles and Circumference	Find the circumference of a circle.	Explain the relationship between the diameter and circumference of a circle. Use a formula to find the circumference of a circle.
9.2	Areas of Circles	Find the area of a circle.	Estimate the area of a circle. Use a formula to find the area of a circle.
9.3	Perimeters and Areas of Composite Figures	Find perimeters and areas of composite figures.	Use a grid to estimate perimeters and areas. Identify the shapes that make up a composite figure. Find the perimeters and areas of shapes that make up composite figures.
9.4	Constructing Polygons	Construct a polygon with given measures.	Use technology to draw polygons. Determine whether given measures result in one triangle, many triangles, or no triangle. Draw polygons given angle measures or side lengths.
9.5	Finding Unknown Angle Measures	Use facts about angle relationships to find unknown angle measures.	Identify adjacent, complementary, supplementary, and vertical angles. Use equations to find unknown angle measures. Find unknown angle measures in real-life situations.

Through the Chapter					
Standard	9.1	9.2	9.3	9.4	9.5
7.G.A.2 Draw (freehand, with ruler and protractor, and with technology) geometric shapes with given conditions. Focus on constructing triangles from three measures of angles or sides, noticing when the conditions determine a unique triangle, more than one triangle, or no triangle.				*	
7.G.B.4 Know the formulas for the area and circumference of a circle and use them to solve problems; give an informal derivation of the relationship between the circumference and area of a circle.	•	•	*		
7.G.B.5 Use facts about supplementary, complementary, vertical, and adjacent angles in a multi-step problem to write and solve simple equations for an unknown angle in a figure.					*
7.G.B.6 Solve real-world and mathematical problems involving area, volume and surface area of two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes, and right prisms.			•		

Chapter 10 - Surface Area and Volume

	Section	Learning Target	Success Criteria
10.1	Surface Areas of Prisms	Find the surface area of a prism.	Use a formula to find the surface area of a prism. Find the lateral surface area of a prism.
10.2	Surface Areas of Cylinders	Find the surface area of a cylinder.	Use a formula to find the surface area of a cylinder. Find the lateral surface area of a cylinder.
10.3	Surface Areas of Pyramids	Find the surface area of a pyramid.	Use a net to find the surface area of a regular pyramid. Find the lateral surface area of a regular pyramid.
10.4	Volumes of Prisms	Find the volume of a prism.	Use a formula to find the volume of a prism. Use the formula for the volume of a prism to find a missing dimension.
10.5	Volumes of Pyramids	Find the volume of a pyramid.	Use a formula to find the volume of a pyramid. Use the volume of a pyramid to solve a real-life problem.
10.6	Cross Sections of Three-Dimensional Figures	Describe the cross sections of a solid.	Explain the meaning of a cross section. Describe cross sections of prisms and pyramids. Describe cross sections of cylinders and cones.

Through the Chapter						
Standard	10.1	10.2	10.3	10.4	10.5	10.6
7.G.A.3 Describe the two-dimensional figures that result from slicing three-dimensional figures, as in plane sections of right rectangular prisms and right rectangular pyramids.						*
7.G.B.4 Know the formulas for the area and circumference of a circle and use them to solve problems; give an informal derivation of the relationship between the circumference and area of a circle.		•				
7.G.B.6 Solve real-world and mathematical problems involving area, volume and surface area of two- and three-dimensional objects composed of triangles, quadrilaterals, polygons, cubes, and right prisms.	•		•	•	*	

Vocabulary

• circle, center, radius, diameter, circumference, pi, semicircle, composite figure, lateral surface area, regular pyramid, slant height, cross section

UNIT 5: PROBABILITY & STATISTICS

Chapter 7 - Probability

Section	Learning Target	Success Criteria
7.1 Probability	Understand how the probability of an event indicates its likelihood.	Identify possible outcomes of an experiment. Use probability and relative frequency to describe the likelihood of an event. Use relative frequency to make predictions.
7.2 Experimental and Theoretical Probability	Develop probability models using experimental and theoretical probability.	Explain the meanings of experimental probability and theoretical probability. Find experimental and theoretical probabilities. Use probability to make predictions.
7.3 Compound Events	Find sample spaces and probabilities of compound events.	Find the sample space of two or more events. Find the total number of possible outcomes of two or more events. Find probabilities of compound events.
7.4 Simulations	Design and use simulations to find probabilities of compound events.	Design a simulation to model a real-life situation. Recognize favorable outcomes in a simulation. Use simulations to find experimental probabilities.

Through the Chapter					
Standard	7.1	7.2	7.3	7.4	
7.SP.C.5 Understand that the probability of a chance event is a number between 0 and 1 that expresses the likelihood of the event occurring. Larger numbers indicate greater likelihood. A probability	*				
near 0 indicates an unlikely event, a probability around $\frac{1}{2}$ indicates an event that is neither unlikely nor likely, and a probability near 1 indicates a likely event.					
7.SP.C.6 Approximate the probability of a chance event by collecting data on the chance process that produces it and observing its long-run relative frequency, and predict the approximate relative frequency given the probability.	•	*			
7.SP.C.7a Develop a uniform probability model by assigning equal probability to all outcomes, and use the model to determine probabilities of events.		*			
7.SP.C.7b Develop a probability model (which may not be uniform) by observing frequencies in data generated from a chance process.	•	*			
7.SP.C.8a Understand that, just as with simple events, the probability of a compound event is the fraction of outcomes in the sample space for which the compound event occurs.			•	*	
7.SP.C.8b Represent sample spaces for compound events using methods such as organized lists, tables and tree diagrams. For an event described in everyday language (e.g., "rolling double sixes"), identify the outcomes in the sample space which compose the event.			*		
7.SP.C.8c Design and use a simulation to generate frequencies for compound events.				*	

Key Vocabulary

 experiment, outcomes, event, favorable outcomes, probability, relative frequency, experimental probability, theoretical probability, sample space, Fundamental Counting Principle, compound event, simulation, population, sample, unbiased sample, biased sample

Chapter 8 - Statistics

	Section	Learning Target	Success Criteria
8.1	Samples and Populations	Understand how to use random samples to make conclusions about a population.	Explain why a sample is biased or unbiased. Explain why conclusions made from a biased sample may not be valid. Use an unbiased sample to make a conclusion about a population.
8.2	Using Random Samples to Describe Populations	Understand variability in samples of a population.	Use multiple random samples to make conclusions about a population. Use multiple random samples to examine variation in estimates.
8.3	Comparing Populations	Compare populations using measures of center and variation.	Time the measures of center and variation of a data set. Describe the visual overlap of two data distributions numerically. Determine whether there is a significant difference in the measures of center of two data sets.
8.4	Using Random Samples to Compare Populations	Use random samples to compare populations.	Compare random samples using measures of center and variation. Recognize whether random samples are likely to be representative of a population. Compare populations using multiple random samples.

Through the Chapter						
Standard	8.1	8.2	8.3	8.4		
7.SP.A.1 Understand that statistics can be used to gain information about a population by examining a sample of the population; generalizations about a population from a sample are valid only if the sample is representative of that population. Understand that random sampling tends to produce representative samples and support valid inferences.	*					
7.SP.A.2 Use data from a random sample to draw inferences about a population with an unknown characteristic of interest. Generate multiple samples (or simulated samples) of the same size to gauge the variation in estimates or predictions.	•	•		*		
7.SP.B.3 Informally assess the degree of visual overlap of two numerical data distributions with similar variabilities, measuring the difference between the centers by expressing it as a multiple of a measure of variability.			*			
7.SP.B.4 Use measures of center and measures of variability for numerical data from random samples to draw informal comparative inferences about two populations.				*
